Introduction

- Sales data helps businesses track revenue and product performance.
- This project analyzes Nigeria's retail sales from 2023–2025.
- Focus areas: data cleaning, trend analysis, and visualization.
- Objective: to uncover patterns that guide pricing and resource allocation.

Dataset Overview

- Dataset Name: *Nigeria Messy Sales Dataset (2023–2025)*
- Source: Kaggle
- Records: 550 rows, 9 columns
- Key columns: Customer Name, State, Product, Units Sold, Unit Price, Total Sale, Sale Date, Sales Channel, Order ID.

Research Questions

1. Which products and channels contribute most to total revenue?
2. How do seasonal trends affect sales across regions and channels?
3. What is the relationship between price, quantity sold, and total revenue?
4. How much revenue is lost to “Unidentified” customers?

Data Cleaning Summary

- Cleaning performed entirely in Microsoft Excel.
- Handled missing values using averages and formulas.
- Standardized text (state, product names.)
- Extracted Day, Month, Year from *Sale Date*.
- Removed duplicates and recalculated *Total Sale*.
- Final cleaned data saved in *Excel for easy analysis*.

Visualizations And Dashboard

Insights and Conclusions

- Keyboard and Tablets generated highest revenue.
- Wholesale channel outperformed Online.
- Delta, Imo, Kano are key sales regions.
- Seasonal peaks show strong festive demand.
- Some sales linked to “Unidentified” improve data collection.

Limitations and Future Work

- Missing and inconsistent data limited analysis depth.
- Cleaning done manually in Excel limited automation

Future work:

- Use Python/Power BI for advanced analysis.
- Add marketing, discount, profit, and demographic data.
- Strengthen customer data capture for accuracy.
